

In 2017, more than 22,400 women were diagnosed with ovarian cancer in the United States. It affects about 1 in 70 women in the U.S and is the second most common gynecological cancer behind only endometrial cancer. The average age at diagnosis is 63. Worldwide about 240,000 women are diagnosed each year with ovarian cancer. The incidence, which is the number of people with a disease over a given period of time such as one year, is greater in developed countries.
